EDUCATION

Hope College

Bachelor of Science - Computer Science

Holland, MI

EMPLOYMENT

Full-Stack Developer

November 2022 - February 2024

Benduka Arts

Los Angeles, CA

- Using **NextJS** and **Tailwind**, overhauled the front-end of the entire online art portfolio and storefront with custom-built components based on the clients design preferences, improving performance and modernizing the interface. This upgrade improved the overall user experience leading to increased site traffic and sales.
 - Built over 20 **Responsive UI Components** integrated with an administrator controlled **Content Management System**
 - Integrated **Session IDs** to visitors for logging analytics of returning visitors and unique visitors
- Developed a backend with **MongoDB/Mongoose**, **Stripe**, and **Cloudinary**
 - Integrated MongoDB triggers to handle updates across all products and pricing in a collection
 - Leveraged StripeAPI to integrate a product creation and payment processing workflow
- Communicated directly with client to identify and deliver new features and timely bug fixes

Full-Stack Developer

November 2023 - August 2024

Hotline Media

Remote - CA

- Developed a design plan to build an efficient and effective full-stack web application for Hotline Media, a startup content management media service, using **Webflow CMS**
- Leveraged **Webflow CMS**, **Javascript**, and **CSS** to build over **15 Custom Responsive UI Components**
- Collaborated in meetings with Hotline Media founders to determine site features, content updates, and administrative roles

PROJECTS

[Maison Matho](#) | *Next.js, Vercel, PostgreSQL, Supabase*

February 2026

- Developed an online portal for the Restaurant Maison Matho allowing patrons to view a pictured menu, access online ordering on preferred platforms, leave personalized reviews, and receive reward opportunities using NextJS, PostgreSQL through Supabase hosted on a Vercel Domain
- Developed a CMS for administrators to update business-specific information, such as hours, menu items, pricing, and special events

[SpotifyGroupQueue](#) | *Next.js, Vercel, MongoDB, SpotifyApi*

October 2022

- Developed a Spotify Web App for for social gatherings and listening parties with NextJS, MongoDB and SpotifyAPI hosted on a Vercel Domain
 - Users have the ability to host group listening sessions, join existing sessions, request and modify the current music playback from their Spotify account, for a seamless DJ experience
 - Implemented Spotify OAuth, along with cookies and a backend using MongoDB/NextAuth for user sessions and Listening Party Session IDs
